Professional Summary

Software Engineer with 4+ years of experience building web products at scale at Mercado Libre. Designed and implemented micro-frontends with SSR, developed REST APIs using Go and Java, integrated advertising platforms (Meta, TikTok) for catalog synchronization, built analytics dashboards with Looker, and managed production infrastructure with traffic, latency, and availability monitoring (DataDog, New Relic). Actively seeking a semi-senior or senior role where I can combine my experience in UI architecture with product, data, and technology perspectives while growing toward a full-stack profile.

Technical Skills

Frontend:
React · TypeScript · Next.js · SSR (Server-Side Rendering)
Micro-frontends · Redux · JavaScript (ES6+) · HTML5 · CSS3 · SASS
Design Systems · Atomic Design

Backend:
Node.js · Express · RESTful APIs · Go · Java
NestJS (learning)

Testing:
Jest · React Testing Library · Unit Testing · Integration Testing

Databases:
PostgreSQL · MySQL · MongoDB · SQL Server

Infra & DevOps:
AWS (learning) · Docker · CI/CD Pipelines · Jenkins
DataDog · New Relic · Git

Analytics:
Looker · Tableau · BI Dashboards

Architecture: Microservices, RESTful APIs, Design Systems, Atomic Design, BEM Methodology

Methodologies:
Agile · SCRUM

Professional Experience

Mercado Libre

Software Engineer | March 2023 – December 2024

- **Led** the technical design and implementation of features for seller marketing tools (catalog synchronization with Meta and TikTok, Ads creation), impacting thousands of merchants across Latin America.
- **Designed** BI dashboards using Looker and Tableau to measure engagement, feature adoption, and user behavior, generating insights that guided product decisions and business strategy.
- **Managed** production infrastructure during on-call rotations by monitoring traffic, latency, and availability using DataDog and New Relic, making critical scalability decisions and coordinating incident response with cross-functional teams.
- **Participated** actively in architecture decisions and technical planning, evolving from an execution-focused role toward design and strategy responsibilities.

Software Development Analyst | May 2021 – March 2023

- **Developed** and maintained web applications used by thousands of sellers to synchronize catalogs with advertising platforms (Meta, TikTok) and support promotional campaigns.
- **Built** micro-frontends with SSR and headless CMS architecture (React + TypeScript), optimizing performance, SEO, and content editing experience.
- **Implemented** and maintained microservices using React, TypeScript, and Node.js, with backend contributions in Go and Java, including custom endpoints supporting frontend features.
- **Managed** CI/CD pipelines with automated deployments, release testing, and gradual feature rollouts in production.
- **Mentored** two senior engineers during their onboarding process, guiding them through system architecture, workflows, and team practices — recognized as a key factor in my promotion.
- **Contributed** to code reviews and architectural discussions, supporting the implementation of the design system and engineering best practices.

Seico Technology

Frontend Developer | May 2020 – August 2020

- **Contributed** to the redesign and refactoring of the QualyFlight application as part of the frontend team.
- **Created** a complete Design System using SCSS, based on BEM and Atomic Design methodologies to ensure consistency and scalability.
- **Refactored** legacy frontend code by implementing modern best practices and improving code maintainability.
- **Worked** in an Agile/SCRUM environment using GitLab for version control and collaboration.

Technical Support Engineer | July 2015 – July 2020

- **Performed** data analysis using SQL Server and Excel to resolve incidents and support quality control processes.
- **Executed** software implementations, training sessions, and product demonstrations for clients.

Key Achievements

- Transitioned from technical support to software development in less than 1 year through an intensive program (Platzi Master + self-learning).
- Learned Go and Java independently to develop backend endpoints and reduce backend team workload — without being requested to do so.
- Mentored two senior engineers during their onboarding process despite being the youngest team member — recognized as a key factor in my promotion to Software Engineer.
- Demonstrated bilingual experience by conducting technical interviews and handling English documentation comfortably.
- Maintained an active self-learning path by currently studying Next.js, NestJS, and AWS through personal projects using real-world architecture (CI/CD, testing, infrastructure as code).

Projects

Pomodoro Timer — React, TypeScript, Vite (In Progress)
Interactive Pomodoro timer with testing, CI/CD, and deployment. Built with hexagonal architecture and separation between domain, application, and infrastructure layers.
→ github.com/juancaricodev/pomodoro-timer

Feature Flag Service — Next.js, NestJS, PostgreSQL, AWS (In Planning)
Feature flag system with dashboard, client SDK, and real-time evaluation. Full-stack project with infrastructure as code.

Education & Training

Systems Engineering — UNAD (2018 - 2019, 2 semesters)
Foundations of programming, algorithms, and data structures.

Aeronautical Engineering — Fundación Universitaria Los Libertadores (2014 - 2017, 6 semesters)
Training in advanced mathematics, physics, and complex problem-solving.

Platzi Master Program | January 2020 – April 2020
Intensive 500+ hour software development program.
